

National Respiratory Care Week – October 25-31

Respiratory therapists (RTs) at Hamilton Healthcare System are valued members of the healthcare team. RTs care for patients of all ages with breathing disorders such as asthma, bronchitis, COPD, cystic fibrosis, emphysema and obstructive sleep apnea. RTs provide emergency care, lung disease education, operate nebulizers, inhalers, and ventilators, as well as perform pulmonary function tests, arterial blood gases, exercise treadmill tests and administer oxygen. RTs are licensed by the Texas Medical Board under physician supervision.

In celebration of National Respiratory Care Week, October 25-31, 2020, Hamilton Healthcare System proudly recognizes the respiratory therapists for extraordinary excellence in treating patients in our community with dignity, respect and care 24/7.

RTs are here for you when you need us!
